Science Basics for the Drug and Medical Device Lawyer

With each case, defense lawyers must take a deep dive into the intricacies of specific, frequently very narrow, areas of science and medicine. *Science Basics for the Drug and Medical Device Lawyer* is meant to provide background knowledge, and act as a starting point, in several areas that defense practitioners commonly encounter. Before you meet an expert in a new field for the first time, review the relevant chapter and go into the meeting a little smarter and asking the right questions. Chapters cover the following:

- Navigating the Strictures of Reliability to Challenge a Differential Etiology
- Avoiding the “Causation Conflation” Trap in a Pharmaceutical Case
- Bradford Hill Criteria
- Epidemiology
- Immunology
- Genetics and Molecular/Cell Biology
- Urogynecology
- Bleeding and Clotting
